CLEAN  
FILLER

The final safety guarantee  
before bottling.

# EXPERIENCE AND INNOVATION FOR FOOD & BEVERAGE

For over 20 years Idroricerche has been aimed at enhancing the importance of water resource, a fundamental element for life, nutrition, processing in any type of production process.

Our specialization in the Food & Beverage sector drove us to research and develop technological solutions for the treatment of water and process fluids, extremely important for the final quality of final products.

It is thanks to the experience gained over the years that we designed, projected and realized **Clean Filler**, a revolutionary system integrated in the filling group to guarantee the quality and safety of the product close to the bottling line.

# IDRO CLEAN FILLER

## DESCRIPTION

- Confidential application that guarantees quality and purity of the final product
- Breather tank with a mobile element holder plate
- Compliant with PED regulation

## PRELIMINARY OPERATIONS

- Assessment of the characteristics of the water that needs treatment
- Design and sizing suitable for the type of production
- Main objective: to obtain the maximum efficiency of the plant based on the customer's needs

## ADVANTAGES

- Guarantee of microbiological safety at the level of the bottling line
- Quality of the final product, without altering its features
- "Plug and play" system: easy to install and initialize
- Suitable for any type of production line
- Easy maintenance operations

## FEATURES

- Stainless steel structure and accessories
- Flow rate up to 120 m<sup>3</sup>/h
- Liquid path: top inlet, bottom outlet
- Two possible sizes: 24 or 35 cartridge plate
- Motorized opening, electrically powered
- Automatic mechanisms for lifting and maintenance operations

## AFTER SALE

- Implant supplied tested and ready for use
- Possibility of start up: installation and integration with the existing production
- Availability and planning of dedicated assistance formulas
